#### Special hazards arising from the substance or mixture:

Combustible solid which burns but propagates flame with difficulty. This material in sufficient quantity and reduced particle size is capable of creating a dust explosion. Sensitivity to static discharge is not expected under normal conditions, however, dusts must be controlled to avoid potential ignition. Keep product and empty container away from heat and sources of ignition.

#### Advice for firefighters:

As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.

## Section 6 - Accidental Release Measures

### Personal precautions, protective equipment and emergency procedures

If packages rupture. Ensure adequate ventilation. Use personal protective equipment. Keep people away from and upwind of spill/leak. Evacuate personnel to safe areas. Spilled or released at long industrial condition: Remove ignition sources, Keep away from heat and flame, evacuate area. Avoid dust formation. Avoid breathing dust. Shut off source of the leak only if it is easy to do so. Do not get water inside containers.

### Environmental precautions

Keep spilled material out of sewers, ditches and bodies of water.

### Methods and materials for containment and cleaning up

Sweep up and place in suitable containers for recycle or disposal according to local / national regulations (see section 13). Keep in suitable, closed containers for disposal.

### Reference to other sections

See Section 7 for information on safe handling.

See Section 8 for information on personal protection equipment.

See Section 13 for disposal information.

## Section 7 - Handling and Storage

### Precautions for safe handling

Dust generated in handling of this product can be explosive if sufficient quantities are mixed in air. In accordance with good industrial practice, handle with care and avoid unnecessary personal contact. Wash thoroughly after handling. Use with adequate ventilation. Minimize dust generation and accumulation. Avoid contact with eyes, skin, and clothing. Avoid breathing dust. Avoid physical damage to the container. Ground and bond containers when transferring material. Take necessary action to avoid static electricity discharge. Do not eat, drink or smoke while handling the product. Keep away from heat. Keep away from sources of ignition. Do not allow water to get into the container.

### Conditions for safe storage, including any incompatibilities

Keep away from heat and flame. Store in a cool, dry, well-ventilated away from incompatible substances. Store in a tightly closed container. Keep away from moisture and water. Keep out of the reach of children.

**Specific target organ toxicity - single exposure** No data available

**Specific target organ toxicity - repeated exposure** No data available

**Aspiration hazard** No data available

**Potential Health Effects**
**Eye:** The material may cause eye irritation. Prolonged eye contact may cause inflammation characterised by a temporary redness of the conjunctiva.

**Skin:** Skin contact with the material may be harmful; systemic effects may result following absorption. This material can cause inflammation of the skin on contact in some persons. The material may accentuate any pre-existing dermatitis condition. Open cuts, abraded or irritated skin should not be exposed to this material. Entry

 Page 6 of 8

into the blood-stream, through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects.

**Ingestion:** Ingestion is an unlikely route of exposure; no hazard in normal industrial use. Accidental ingestion of the material may be harmful; Single and repeated dose studies in animals by oral and skin routes of cyanuric acid and some cyanurates doses several studies showed kidney damage. Triazine derivatives have been shown to cause structural damage to the liver in animal studies.

**Inhalation:** Inhalation of airborne dust may cause irritation to the mucous membrane and upper airways. Symptoms of exposure can include coughing, sneezing and breathing difficulties. The body's response to such irritation can cause further lung damage. Persons with impaired respiratory function, airway diseases and conditions such as emphysema or chronic bronchitis, may incur further disability if excessive.

### Signs and Symptoms of Exposure

Substance accumulation, in the human body, may occur and may cause some concern following repeated or long-term occupational exposure. When ingested in large amounts the substance may have effects on the kidneys, resulting in tissue lesions. Long-term exposure to respiratory irritants may result in disease of the airways involving difficult breathing and related systemic problems. Strong evidence exists that this substance may cause irreversible mutations (though not lethal) even following a single exposure. Laboratory (in vitro) and animal studies show, exposure to the material may result in a possible risk of irreversible effects, with the possibility of producing mutation. To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.
